

Cloud Business Intelligence (BI)

Cloud-hosted BI applications make business data more accessible than ever before. Applications are hosted on a virtual network, such as the Internet. They are used to provide organisations access to BI-related data such as dashboards, KPIs and other business analytics.

Cloud BI Login

Advantages of cloud computing for BI users

Cloud BI offers some significant advantages over on-premise applications. Here are a few of these advantages:

Key Benefits:

Ease of use

Cloud BI applications, like other cloud applications, tend to be easier for end-users to operate and set up. This means reduced IT involvement and costs.

Deployment speed

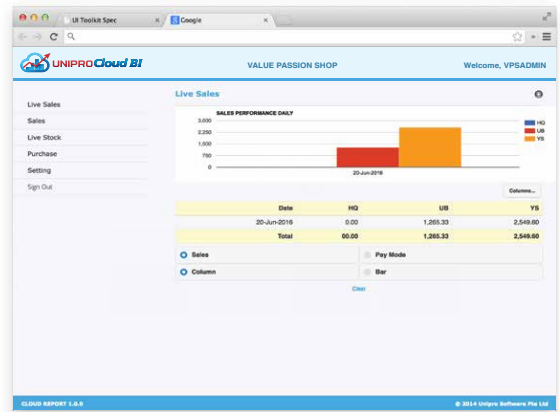

Cloud applications are very simple to deploy, since they require no additional hardware or software installations.

Scalability and elasticity

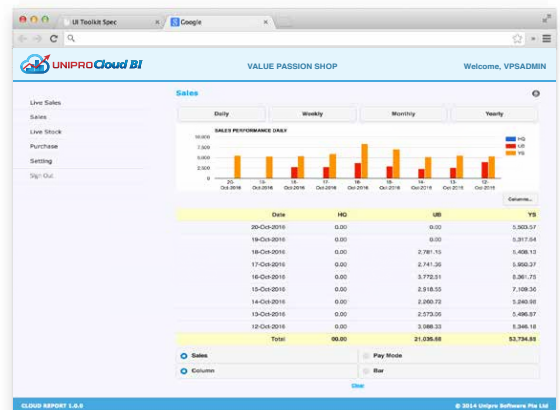

Cloud applications can be rapidly scaled to accommodate for an increase in the number of users in an organization.

Accessibility

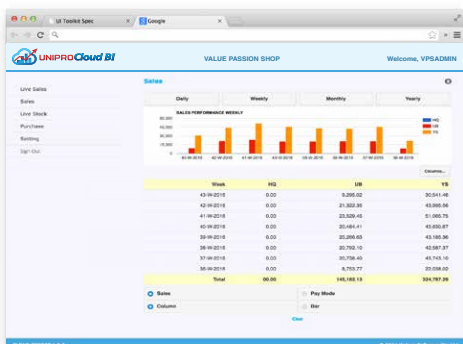

Cloud BI applications can be accessed on any web browser or on any mobile device.
